

UNIT DOSE DELIVERY SYSTEM
ABSTRACT OF THE DISCLOSURE

5 The invention includes a delivery system for a composition made of two or more
components, the assembly of a container for use in the system, a method for providing a
composition, and a delivery system including an applicator and container. In one
embodiment, the container includes an outer housing holding a first mass of a first
component of the composition, an inner housing holding a second mass of a second
component of the composition, and a seal. The first component is a liquid and the mass of
10 the second component conforms to a bottom and side wall of the inner housing. An
interference fit exists between the outer housing and the inner housing such that the inner
housing seals the first mass within the first chamber. The inner housing has an aperture in
a side wall of the second chamber.
